Subject: My experiences with the new water filter for limescale removal

Greetings everybody!

My name is Katarina Hojski and I have the honour to be the person who deserves a great part of the credit for the amazing descaling effect of the filter.

I'm from Maribor, more precisely from Pobrežje, where we have very hard water. The water quality in comparison with the surrounding area is said to be quite high, but from the 13th January 2015 I'm not so sure anymore (at least considering limescale).

I've known Thomas for some years and that day we had a lengthy conversation. Suddenly he offered me a water filter and since we were just renovating our house and renewed the bathroom about a year ago, yet had to already change the faucet again, of course I immediately grabbed the idea. All I could think about was: *"Will I get rid of the stubborn limescale?"*

Together with my husband we've looked into all kinds of filtration systems, but all of them are quite expensive and were not yet available to us. I explained this problem to Thomas and he told me we'll talk a little later, since he had to modify his filter a bit. Originally he developed it for another purpose. We continued our conversation about half an hour later and he told me to find two identical clean glass jars. I had to pour some cold water into the sink first, then fill one with cold water. After I told Thomas I'm done and some more chat, he said: ***"Here you go, it's installed."***

Of course, I had no idea what is going on. And now, that it was installed I poured the other glass and Thomas asked me to try it and see whether I feel any difference. At this point I want to say that I am aware of the importance of water and the sufficient intake of it for our bodies. But I could not drink the tap water in our home, at least not in large quantities. So, 4 years ago, I bought the Britta pitcher. Water filtered through this filter pitcher, I could drink, even in large quantities.

Now I stood in front of these two, seemingly identical glasses of water and took a sip of the "old" water. I was familiar with the taste, it was fine for about half a glass, but after more than that it kind of got "stuck" in my throat. I cannot describe this feeling in a different way than comparing it to pouring a glass of sand down my throat. Then I took a sip of the "new" water and fell silent. In my defence, I need to explain that this is a rather rare phenomenon that I should be speechless. The water was definitely different... light... soft... just like water beneath Triglav, as from a fresh spring.

I needed a few moments to gather, then informed Thomas, how it seemed to me. Several times I took a sip from one and another glass and I have always had the same feeling. Of course, I could not just accept what just happened. I had to make sure it's not all just in my head. Is this filter the real thing? And so, I thought of an experiment.

To that day I could not boil water directly from the tap in our electric kettle, because already after only one boiling, the whole bottom of the kettle was white from limescale and even the surface of the boiled water had immediately some white powder floating on top. If I left boiled water to stand for some time in the kettle, there would be quite some sediment at the bottom. Thus, I completely cleaned the kettle, poured water directly from the tap and turned it on. There was nothing on the surface and when I poured the water out, the bottom was completely shiny, maybe here and there a white dot. And so, I was speechless for the second time in one day.

The difference was confirmed.

Also on the faucet in the bathroom. Before, I had to rub thoroughly the limescale every week, ten days' top. Helped myself with soaking aggressive chemicals for hours and a lot of vinegar and baking soda. To clean the whole bathroom took me up to eight hours! Now I simply wipe it with a damp microfiber cloth and it's shiny again. Of course, I realize that this faucet is new, but also other, older faucets and sinks in the house, became much easier and way faster to clean.

Other family members have different opinions on the taste of the water, but no one can deny the difference in the electric kettle after boiling water.

I will be happy to update my report on my kitchen and bathrooms as it is such a short time we have the filter installed, but there is already some difference to see.

Thanks, Thomas! You're awesome!

Kati

Supplement from 28th April 2015

Greetings again!

A bit over three months passed after the installation of the filter and its positive effects are more than apparent. Limescale – except for some occasional "outbreaks" – there is an incredible change. There is so much less limescale, and it is easily removable. The yellowish "halo" around the drain in our metal sink has become easily removable and soon disappeared in general. The taste of the water is "light" and fresh. The feeling on the hair while washing is slightly similar to using hair conditioner. The contact with a wound or scratch burns, but they're healing much faster.

Supplement from 12th August 2015

Greetings!

It's been more than 6 months since the installation of the filter, and its effects make us more than happy :-). The biggest "shock", a positive one, of course, was last month, when a stain in the kitchen sink disappeared. I believed it was a factory flaw, since it was present from when we put it in. I have tried to clean it with all kinds of stuff and after a certain time and many, many attempts, I gave up. So, the stain was in the sink a little over 6 years... last month when I was cleaning up I simply wiped it off... and I could not believe my eyes! :-S
Another proof of the amazing features of the filter!

As I bragged about it, I asked Thomas to install it at two of our neighbours. Both have noticed changes for the better and are very grateful. As well as my brother and his wife and my sister-in-law and her boyfriend. All report of better taste of the water and look forward to easier cleaning.

Supplement from 19th October 2016

It's been quite a while since the installation of the water filter (in the meantime Thomas named it Veda filter), but my (and our) excitement is still growing. The water is perfect and has many positive attributes. They can be seen on the plants, sinks, faucets and our bodies. Thomas made some modifications so the contact with damaged skin no longer burns, yet the wounds still heal much faster. Glasses are shiny, despite the fact that they are washed in the dishwasher with the cheapest detergent. Children drink water without complaining (visitors, which are otherwise used mostly to sweet drinks). Pool water lasts over 5–6 weeks (previously only 2 weeks) and there are many more similar things that we encounter daily.

In short, Thomas, thank you from the heart (and our wallet :-P)
